The term sought will allow mining operations across the four leases to be established and undertaken concurrently, while meeting the applicable disturbance and operational obligations. The 10-year term will also provide sufficient time to fully explore and develop the resource, complete mining activities and undertake rehabilitation to the satisfaction of the relevant administering authority.

Permit Size and Shape (attach maps):

This permit covers an area of approx. 66.43 ha. This area is applied for over gold bearing alluvial channels and will allow for adequate space for extraction and processing of the alluvial resource.

116,000 cubic metres river wash total

Grades are estimated to be around 0.3g per m^3.

MINING LEASE WORK PROGRAM

Mining Methodology:

Mining Method will be to extract material from the creek system, wash material to obtain gold & tin concentrate. Return material to creek system & complete day by day rehabilitation. Extraction method will be clear creek using a ZX350 excavator, build haul roads with 140g grader. Load material into cat 725 articulated dump truck, move material to plant site and wash material with trommel wash plant. Reload with 980b loader and return oversized material to creek system when necessary.

Minimum Mining Rate (tonnes or BCM per hrs/days/years):

Approx. 71-95 tonne of alluvial wash processed per mining day over the estimated 210 days on site per year providing a yearly total of 15,000 to 20,000 tonnes processed per year.

Infrastructure:

A mobile camp may be present on the mining lease throughout the term of the lease. No infrastructure is proposed to be built on the project leases.

Order of production is proposed to be Pack Saddle Top, Pack Saddle Bottom, Andie and then Jack in the Box. This may change with seasonal considerations.

Project production (projected per annum/life):

We will plan to wash 15000 to 20000 ton of material per year depending on length of wet season and other constraints with the aim of spending 30 weeks per year on site.
